

Physical Activity. This accelerator summarizes the latest strategies and practices that have emerged as potential approaches for increasing the percent of **children, ages 6 through 11** and **ages 12 through 17 (adolescent physical activity)**, who are physically active at least 60 minutes per day. It summarizes and updates the [Evidence Analysis Report](#) and provides a framework to identify, understand, and implement “what works” in creating new or strengthening current Evidence-based/informed Strategy Measures (ESMs). Use the links below to access strategy and practice details, approaches, supporting evidence, outcomes, and examples of how Title V agencies are either using these strategies directly or adopting components of the intervention that address this NPM.

Evidence-Based/Informed Strategies. 35 strategies have emerged from studies in the scientific literature as being effective in advancing the NPM. They can be adopted or adapted to meet your program needs. More information on these strategies can be found in the MCH Evidence Center’s [MCHbest](#) database.

Field-Based Practices. 7 practices from state-/community-based programs have emerged as potential approaches for advancing the NPM for specific communities or populations. They can be used as models to meet your program needs. More information can be found in the Association of Maternal and Child Health Program’s (AMCHP’s) [Innovation Hub](#).

A Framework to Advance What Works

Use this accelerator to begin a quality improvement process to strengthen current or new programs, starting with understanding the evidence, linking your program to that evidence, and developing an effective way to measure progress.

As new peer-reviewed and field-generated evidence is compiled, it will be added to databases links in this accelerator, keeping it current with the science and practice. You can also sign up for the [MCHAlert](#) newsletter to receive quarterly updates on emerging evidence. [Read more about “Keeping Current: How We Update the Evidence.”](#)

1. Identify What Works. As of May 2023, 35 evidence-based/informed strategies and 7 field-based programs have emerged as potential approaches for increasing the percent of children, ages 6 through 11 and ages 12 through 17, who are physically active at least 60 minutes per day. Use the links on page 1 to access strategies, approaches, supporting evidence, outcomes, and examples of how states and jurisdictions are either using these strategies directly or adopting components of the intervention that address this NPM. [Read more about the evidence and how it is rated.](#)

2. Understand What Works. Once the evidence has been considered for what works generally, it is important to understand if a strategy is **meaningful** and will work for targeted populations, especially those most affected by health disparities. [Read more about how to adopt or adapt strategies to address the needs of your populations.](#)

3. Implement What Works. To ensure that strategies are **moveable** and have potential to affect desired change, it is important that they are unbiased, significant to public health, and rooted in science, experience, and policy. They should show results that are statistically significant and lead to decisions that bring about change for all population groups, especially those most effected by health inequities. [Read more about implementation tools to use in this process.](#)

4. Measure What Works. To ensure that strategies are **measurable** in addressing issues early and advancing NPMs, a system of translating the evidence into practice is needed. The **Results-Based Accountability (RBA)** framework is one way to strengthen ESMs through a quality improvement process. Title V agencies can strengthen ESMs from measuring “what did we do?” (Quadrant 1) to measuring program outputs that address “how well did we do it?” (Quadrant 2) and eventually to short-term outcomes that answer “how are people better off?” (Quadrants 3 and 4). [Read more about measurement through the RBA process.](#)

5. Report What Works. Use this accelerator to assist completing the ESM Detail Sheet (Form 10E). [Read more tips for filling out Form 10E.](#)

- **Evidence-Based/Informed Strategy Section.** Indicate the strategy that the ESM measures and where you accessed the corresponding evidence (e.g., resources from this accelerator, [MCHbest](#) database, [AMCHP’s Innovation Hub](#), or other source). Briefly describe the evidence for how the strategy advances the NPM.
- **Significance Section.** Describe what aspect of the strategy the ESM measures and why measuring it is important to show progress.

Need More Help?

We are eager to talk with you further about your ESMs. [We provide technical assistance](#) that is customized to your needs and the time you have.
